Matlab Tutorials

MATLAB (matrix laboratory) is a software tool for performing numerical computations with matrices and vectors.

If you want to start using Matlab, I suggest completing the official (free) 'Getting Started' online tutorial here. It requires you to signup for a Mathworks account using an email address. The main Matlab support and documentation page here also provides a wealth of information and reference material.

Other links to Matlab tutorials

- Here is a nice tutorial on Matlab.

- Here is the MIT OCW homepage for their 'Introduction to Matlab' course. You will find slides which give more details and explain some of the more advanced features of Matlab.
