

Name: _____

ID: _____

Clear your desk of everything except pens, pencils and erasers. Show all work clearly and in order. No notes, phones and calculators. You have 10 minutes to finish the test for 10 points.

The one on the back worth two extra points. Maximum of 10 points will be recorded for each quiz.

1. (4 points) A particle moves according to the law of motion

$$s(t) = t^3 - 2t^2 + 3t, \quad t > 0$$

where t is measured in seconds and s in feet. Find the average velocity over the interval $[0, 2]$.

$$\begin{aligned} \text{Average vel.} &= \frac{s(2) - s(0)}{2 - 0} = \frac{2^3 - 2 \cdot 2^2 + 3 \cdot 2 - 0}{2} \\ &= \frac{8 - 8 + 6}{2} \\ &= \boxed{3 \text{ ft/s}} \end{aligned}$$

2. Compute the following limits (a finite number, $+\infty$ or $-\infty$) where

$$f(x) = \frac{1}{x-2}$$

- (a) (3 points)

$$\lim_{x \rightarrow 4} f(x) = \lim_{x \rightarrow 4} \frac{1}{x-2} \quad \underline{\text{Plug in 4}} \quad \frac{1}{4-2} = \boxed{\frac{1}{2}}$$

- (b) (3 points)

$$\begin{aligned} \lim_{x \rightarrow 2^-} f(x) & \quad \text{Plug in 2, } \frac{1}{2-2} = \infty. \\ & \quad x \rightarrow 2^- \text{ from left, } x < 2 \Leftrightarrow x-2 < 0 \\ & \quad \text{negative.} \\ \lim_{x \rightarrow 2^-} \frac{1}{x-2} &= \boxed{-\infty} \end{aligned}$$

(★ Finish the problems on the front page first. No more than 10 points may be earned on the quiz. The extra problem is of average (or above) actual exam difficulty level. It is recommended to do it now or later to check whether you handle the materials well enough for the exam.)

[2 extra points] Compute the limit (a finite number, $+\infty$ or $-\infty$):

$$\lim_{x \rightarrow -2^-} \frac{1-x}{x^2(x+2)}$$

Plug in -2. $\frac{1-(-2)}{(-2)^2 \cdot (-2+2)} = \frac{3}{4 \cdot 0} = \frac{\text{number}}{0}$

$x \rightarrow$ from left. $= \infty$

$x = -3$. $\frac{1-(-3)}{(-3)^2 \cdot (-3+2)} = \frac{4}{9 \cdot (-1)} < 0$ negative.

$$\lim_{x \rightarrow -2^-} \frac{1-x}{x^2 \cdot (x+2)} = \boxed{-\infty}$$
