Math 20C.  
Final Exam  
June 15, 2006

*No calculators or any other devices are allowed on this exam.*

*Write your solutions clearly and legibly; no credit will be given for illegible solutions.*

*Read each question carefully. If any question is not clear, ask for clarification.*

**Answer each question completely, and show all your work.**

1. (10 points) Find the plane through the point  $P_0 = (2, 1, -1)$  which is perpendicular to the planes  $2x + y - z = 3$  and  $x + 2y + z = 2$ .

2. (8 points) Decide whether the  $\lim_{(x,y) \rightarrow (0,0)} \frac{x^4 - y^2}{x^4 + y^2}$  exists. Give reasons your answer.

3. (8 points) Does the function  $f(x, y, z) = e^{3x+4y} \cos(5z)$  satisfy the Laplace equation  $f_{xx} + f_{yy} + f_{zz} = 0$ ? Give reasons your answer.

4. (10 points) Find the linear approximation  $L(x, y)$  of the function  $f(x, y) = \sqrt{6 - x^2 - y^2}$  at the point  $(1, 1)$ . Use this approximation to estimate the value of  $f(0.8, 1.1)$ .

5. (10 points) Find the local maxima, local minima and saddle points of the function

$$f(x, y) = x^3 + y^3 + 3x^2 - 3y^2 - 8.$$

6. (10 points) Use Lagrange multipliers to find the maximum and minimum values of the function  $f(x, y) = -\frac{1}{x} + \frac{1}{y}$  subject to the constraint  $\frac{1}{x^2} + \frac{1}{y^2} = 1$ .

7. Consider the integral  $\int \int_D f(x, y) dA = \int_0^3 \int_{-2\sqrt{1-\frac{x^2}{3^2}}}^{2(1-\frac{x}{3})} f(x, y) dy dx$ .

(a) (8 points) Sketch the region of integration.

(b) (8 points) Switch the order of integration in the above integral.

(c) (8 points) Compute the integral  $\int \int_D f(x, y) dA$  for the case  $f(x, y) = xy$ .

8. (10 points) Transform to polar coordinates and then evaluate the integral

$$I = \int_{-1}^1 \int_0^{\sqrt{1-y^2}} (x^2 + y^2)^{3/2} dx dy.$$

9. (10 points) Find the volume of a parallelepiped whose base is a rectangle in the  $z = 0$  plane given by  $0 \leq y \leq 1$  and  $0 \leq x \leq 2$ , while the top side lies in the plane  $x + y + z = 3$ .
