Quiz 1

September 5, 2018

1) Determine the volume of the solid obtained by rotating the region bounded by  $y = \frac{1}{2}x$ ,  $x = 0$  and  $y = 1$  about the  $y$ -axis.

at height  $y$ , cross-section  
is circular, of Area

$$\begin{aligned} A(y) &= \pi r^2(y) \\ &= \pi (2y)^2 \\ &= 4\pi y^2 \end{aligned}$$

$$\text{So, } V = \int_0^1 A(y) dy = \int_0^1 4\pi y^2 dy = \left. \frac{4\pi y^3}{3} \right|_0^1 = \frac{4\pi}{3}.$$

2) Set up the integral, but do not solve: Determine the volume of the solid bounded by rotating the region bounded by  $y = x^2$  and  $y = x^3$  about the  $y$ -axis.

$$\begin{aligned} r(y) &= y^{\frac{1}{2}} - 0 = y^{\frac{1}{2}} \\ R(y) &= y^{\frac{1}{3}} - 0 = y^{\frac{1}{3}} \end{aligned}$$

at height  $y$ , the cross-section is a washer, of Area

$$A(y) = \pi (R^2(y) - r^2(y)) = \pi (y^{\frac{2}{3}} - y)$$

So,  $V = \int_0^1 A(y) dy = \int_0^1 \pi (y^{\frac{2}{3}} - y) dy \leftarrow \boxed{\text{Stop Here}}$

Not required

$$= \pi \left( \frac{3}{5} y^{\frac{5}{3}} - \frac{1}{2} y^2 \right) \Big|_0^1$$

$$= \pi \left( \frac{3}{5} - \frac{1}{2} \right)$$

$$= \left( \frac{\pi}{10} \right)_2$$
