

Math 993 Spring 2017  
Harmonic and  $J$ -Holomorphic Maps

**Class meets:** 12:40 – 1:30 MWF in C-304 Wells Hall.

<b>Professor:</b> T. Parker	<b>Office hours:</b> Monday: 1:30-2:30
<b>Office:</b> C-346 Wells Hall 353-8493	Wednesday 3-4
<a href="mailto:parker@math.msu.edu">parker@math.msu.edu</a>	Friday 2-3

**Class Web page:** [math.msu.edu/~parker/HHM](http://math.msu.edu/~parker/HHM).

This course covers both harmonic and  $J$ -holomorphic maps. One goal is to include new approaches to the issue of bubbling and conformal invariance.

**Prerequisites:** A working knowledge of (i) Riemannian geometry and (ii) elliptic PDE at the level of Evans' Chapters 5 and 6.

**Course Content:** The following is a tentative outline of the course, in order.

- |                                     |  |
|-------------------------------------|--|
| 1. Harmonic maps                    | 7. Analysis results and regularity                 |
| 2. Symplectic geometry and topology | 8. Bubbling  |
| 3. $J$ -holomorphic maps            | 9. Polarized symplectic manifolds                  |
| 4. Riemann surfaces                 | 10. Gromov compactness theorem.                    |
| 5. Complex curves                   | 11. Virtual fundamental classes and GW invariants. |
| 6. Gromov-Witten moduli spaces      | 12. Harmonic map heat flow.                        |

**Textbook:** *Riemannian Geometry and Geometric Analysis*, by Jurgen Jost.

**Additional books:** The following books are cover the same topics, with varying styles.

1. Fanghua Lin and Changyou Wang, *The analysis of harmonic maps and their heat flows*.
2. D. McDuff and D. Salamon,  *$J$ -holomorphic curves and quantum cohomology*. (“short book”)
3. D. McDuff and D. Salamon,  *$J$ -holomorphic curves and symplectic topology*. (“big book”)

**Grades:** Course grades will be based on homework assignments and on team projects. (The nature of the projects will be explained in class).
