- **The highest term rule:** Keep the highest term in each brackets in the numerator and denominator. Drop all the lower order terms.

4.3[Sec3.5, Curve Sketching]

- **Slant asymptote:** If a rational function $f(x) = mx + b + \frac{r(x)}{d(x)}$ via polynomial long(short) division and

$$\lim_{x \rightarrow \pm\infty} f(x) - (mx + b) = \lim_{x \rightarrow \pm\infty} \frac{r(x)}{d(x)} = 0,$$
