528 Related rates. V(t): volume Model: Pumping our into a balloon. at the t htt): radius at Rate of change of the volume and Pumping air time t. note of change of the radius are V. r is increasing. t related to each other. i.e., V(t) and r'(t) are related to each other. Question (Goal): What is the exact relation? How to find one given the other pate? eg. 1. Air is being numbed into the a sphrid balloon so that its volume increases at a rote of 100 cm3/s. How fast is the radius of the balloon increasing when the diameter is 50 cm? Step 1: Draw a picture with all the given information and helations/formulas. Known: V'(t) = 100 cm/s diameter = 50 cm. v = radius = 25 cm. Step 2: Given formula:  $V = \frac{4}{5}z_1 r^3$ d=det), r=1(t), V=V(t) V(t)=\$z.[r(t)]3 Step3: Take derivative with respect to t in the above (step2) equation.  $V'=(V\oplus)'=\left(\frac{4}{3}\pi\cdot r^3\right)'$ inner: [m]3 inner: r(t). aut/inn) inn ie. V(t)= \$ \( \tau \cdot \tau \c Sop 4: they in all numerical values (Engp1) and solve for the unknown.  $100 = \frac{4}{5}\pi \cdot 25^2 \cdot \gamma'(t) = \gamma \gamma'(t) = \frac{100}{\frac{4}{5}\pi \cdot 25^2} = \frac{3}{25\pi} cn/s.$ 

The most important preparation (before taking derivoire) is the formula in Sep 2. It's direct in some xamples (the eg.1). For more explicated questions, you need to find the quotion relating the variables according to the geometry of the picture (in step 1). If the radius of a waller ink blot is growing at a e-g. 2 (s16, M-c). rate of 3 cm/min. How fast (in cm2/min) is the area of the blot growing when the radius is 10 cm? (Sep1) Area: Att)
Radius: 14). 1=3, 1=10. Solwoon: (Step)2) A= MAR.Y (A) = (x. p2) (auton: A, r are both functions of t (Sop 3) Remember to use chain-rule.

outer: 12 actor = 210 Thyin 2.7 A'tt)=元.(アン)' inner: t(t) = T.2r. r' in = 11 Step 4. Plug is: A = T.2.10.3 = (60T) (cm/min)

A filor filled liquid is the shape of a eg.3. with a relight of 8 inches and a diameter (Pall 16) /ww&7) of 6 inches at its open (upper) end. If

the liquid drips act the pottom of the filter at the constant rate of 7 mmin, han fast is the level of the liquid diappho when the liquid is 5 indes deep?

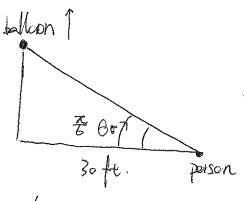

vertex-dawn and

Solution: Step/: Related functions/Target functions) Volume (of the liquid): V(t). Height/level) of the liquid: htt) (kg) known information: V(t) = 7, h(t) = 5.

Other Information: size of the filter:  $\sqrt{\frac{6}{5}}$  circular cross-section. Step 2: (Want to relate V and h in order to find h")
(Search the founds sheet) · Volume of Cone: 3. (height). ( area of base ) V(t) = 1. h(t). (Area of base) Notice that its circular chass-section base is a circle (14) = まれは、たいた) Now we need to eliminate tit? What area: z.f2 ira h according to the geometry of the picture  $\frac{r}{h} = \frac{3}{8}$   $\Rightarrow$  Similar Triangle:  $h(t) = \frac{3}{8}h(t)$  plug in. V(t)= 方·ht).[元·(多ht)]= 方ht).元. 是[ht)]= 强·[ht)] Step 3: Take derivable: V/t) = ( 3 h/t) = 3 [htt) 2 · h/t) aut (inn) inn' Sep4: Thug in V=7, h=5.  $7 = \frac{32}{64} \cdot 3 \cdot 5^2 \cdot h'$  solve for  $h' = \frac{7}{\frac{32}{4} \cdot 3 \cdot 25} = \frac{7 \cdot 64}{97 \cdot 25}$  in/s

Remark: If we read the problem more weefully, the where of the liquid is decreasing. Accurally, V'=-7 and therefore,  $h'=-\frac{764}{97.25}$  whole de sostwe answer is also accepted.

eg 4. A ballon is vising vertically above a field. A person is 30 feet away from (8/6) the spot on the ground underneath the bolloon watching it hise. When the ongle

of indination, B, is of radians, the argle is increasing at to radians per minute. At doe moment, how fast is the balloon rising?

Solution: Sep 1:

Target functions:

height of balloon; htt); angle of indination: O(t)

Krown information: B(t)= = to

Step 2: (Relovan between h and B).

 $h(t) = 30 \cdot tan(\theta(t))$ 

Step 3: Take derivative:

 $h'(t) = 30 \cdot \left[ tan(\theta(t)) \right] = 30 \cdot SeC(\theta(t)) \cdot \theta(t)$ 

Remark: Sec  $\frac{7}{6} = \frac{2}{\sqrt{3}}$ 

Remark:

actor: ton @

inher: O(t)

Sop 4: Ang in:  $\beta = \frac{7}{6}$ ,  $\beta' = \frac{1}{10}$ .

h'(t) = 30. Sec ( 75). 1

 $=30.\left|\sec(\frac{\pi}{6})\right|^{2}$ 

= 30.[素]. 七
